### Indicator light description

Charging instructions	iPhone		20 seconds to go off
	Watch		20 seconds to go off
	Earphone or Phone		20 seconds to go off
When the product is fully charged for your device		Indicator light remains off	
When the power supply to the adapter is insufficient		All lights will flash continuously	
When there is a foreign object on the product		The corresponding light flashes when the position is abnormal!	

### Safety Notes

- Use indoor or under dry environment, avoid placing or using in the environment of high temperature, humidity, strong static electricity and strong magnetic field;  
For your safety, please do not use wet hand plug and unplug electrical appliances;
- Avoid putting it in a place easily accessible to infants and children;
- Do not use the product if it is

contaminated with water or dirt;

- Non-professional personnel are not allowed to open and repair without authorization.

### Using instructions

- Turn on the power, the device will enter the standby state after the blue indicator flashes once.
- Place the Apple Watch in the stand charging area for wireless charger.
- Place the mobile phone with magnetic suction on the magnetic suction position for wireless fast charger.
- Connect the wireless charging headset to the headset charging slot for wireless charger.

### How to solve abnormal charging:

- Please confirm whether your mobile phone has wireless charging function before use;  
"Check whether the phone deviates from the wireless inductive charging area of the charger;  
'Whether a non-metallic protective case is used for charging mobile phones, and the thickness of the protective case is recommended not to exceed 4mm;  
When metal objects touch the charging area, the charger will automatically identify and provide power off protection.  
When the temperature of the charger is too high, it will automatically start the protection. Please unplug the power supply first and use it after the charger recovers the temperature.

### Q&A:

Q: Why is there heating in the charging of wireless charging inductive products?

A: During the charging process, there will be a certain loss of magnetoelectric conversion, which will be converted into heat, causing the mobile phone and charger to generate heat, which

is a normal phenomenon.

**Suggestions:**

- When the device is fully charged, disconnect it from charging time to avoid a long cycle of charging, which may lead to continuous heating of the device and charger;
- It is recommended to stop running the background software when charging the phone.
- If your iPhone is not charging, it may be a version issue. Please upgrade your phone to the latest system, or restart your phone to resolve the issue.
- If the device does not charge your watch, please check if your watch is up to date, if not, please upgrade to the latest system to solve the problem.
- Please charge after the temperature cools. Our chargers have temperature control to ensure your device is safe while charging.
